

Intergrain® enviopro®

Caring for your newly coated timber floors.

Intergrain Enviopro uses advanced water based polyurethane technology to bring you a high performance range of interior timber floor coatings.

To keep your newly coated timber floors in good condition, we recommend following the below tips & tricks.

Take care in the first two weeks.

Floor coatings can be walked on with care after 12 hours, but can take 7-14 days to fully cure.

Only replace light furniture, use protective felt pads and do not drag furniture, to avoid scratching the surface.

Wait two weeks before laying rugs and replacing heavy items.

Don't use rugs or pads with a rubber backing.

Maintenance

The most important thing you can do to keep your coated floor looking its best is to establish a regular cleaning program.

Weekly:

- Use an anti-static dust mop to remove dust and dirt.
- If using a vacuum cleaner ensure that vacuum head brushes are not worn and are free from dirt and grit.

Monthly:

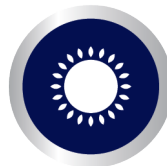

- Use an anti-static dust mop to remove loose dust, dirt and grit. Wash the floor using **Enviopro Squeaky Clean™**, following label instructions.
- **Enviopro Squeaky Clean™** can be used undiluted to assist in the removal of black heel marks and stubborn stains.
- Do not use a steam mop.

Enviopro tips:

Use mats.

Shoes carry sand, grit and small stones which will abrade the floor surface. Place mats at entrances and where possible place a mat on the inside as well as outside. Use runners and rugs in high traffic areas.

Direct light.

Like any quality furnishing or floor covering in your home, direct sunlight can cause discolouring of the timber over time. To avoid fading and discolouring of the timber, filter direct light with curtains or blinds.

For more information on caring for your Enviopro coated timber floors, contact your Enviopro Sales Representative, or phone Enviopro on 1800 630 285. Always follow label instructions.

Intergrain, Endure & Enviopro are registered trade marks. Squeaky Clean is trade marked.
