Thermally Enhanced Hardwood

Permanently altering the look to create a deeper richer, more intense hue of Australian Hardwood.

With the knowledge and skill acquired from the ten years of thermally modifying Australian Hardwood, Hurfords has now developed a process known as Thermally Enhanced Hardwood.

This process uses a unique temperature schedule through the drying process to create a colour palette that reflects the more traditional tones in the species, altering the blush lightness of Sydney Blue Gum to a more timeless deep scarlet intensity.

Another advantage of Thermally Enhanced Hardwood is the transformation of the traditional lighter sapwood to a more natural and attractive warm undertone.

Thermally Enhanced Hardwood

Thermally Enhanced Sydney Blue Gum

- Deeper rich hues.
- More uniform colour.
- Available in a range of sizes.
- Same installation methods.
- Colour locked in through the board.

Specifications:

Hardwood Flooring:	Thermally Enhanced Hardwood

Grade:	Select, Standard & Feature	Select, Standard & Feature	Prestige & Rustic	Select, Standard & Feature	Select, Standard & Feature
Profile:	Plain End	End Matched	End Matched	End Matched	End Matched
Coating Recommendation:	To maintain the deep rich colour of Hurford's Thermally Enhanced Hardwood, Hurford's DOES NOT RECOMMEND the application of WATER BASED FINISHES. Water based finishes can significantly lighten that appearance of Hurford's Thermally Enhanced Hardwood overtime.				

One of the simplest ways you can help protect our forests is to look for the PEFC label on products. When you see the PEFC label, it means that the forest-based material within the product comes from a PEFC-certified forest. This is a forest that is managed in line with the strictest environmental, social and economic requirements. A forest that will be around for generations to come.
